

Technical Service Information

FORD/MAZDA 4F27E/FN4A-EL P0750, P0751 OR NEUTRALIZING IN 4TH

COMPLAINT: Before or after overhaul, Ford or Mazda vehicles equipped with the 4F27E or FN4A-EL transaxle may exhibit a Diagnostic Trouble Code P0750 Shift Solenoid "A" Circuit fault or P0751 Shift Solenoid "A" performance code along with a "Neutralizing" 3-4 upshift.

CAUSE: The cause may be, an electronically or mechanically faulty "A" Shift Solenoid. Due to a poor ground strap connection internally of the solenoid casing, the "A" Shift solenoid will not be able to stroke the 3-4 shift valve fully creating a Neutralizing 3-4 upshift and the Diagnostic Trouble codes.

CORRECTION: To correct this condition, refer to Figure 2 to locate the placement of the "A" Shift Solenoid. Refer to Figure 1 to mechanically air check the "A" Shift Solenoid. Refer to Figure 3 to verify the correct ohm value of the "A" Shift Solenoid. Replace the solenoid as necessary.

SERVICE INFORMATION:

"A" SHIFT SOLENOID (Ford Part Number).....XS4Z-7G383-AA
