THM 440-T4 BOTTOM PAN OIL FILTER CHANGES

CHANGE: Beginning at the Start Of Production for the 1993 model year, THM 4T60 (440-T4) transaxle bottom pan oil filters were revised in appearance.

REASON: Improved reliability and durability.

PARTS AFFECTED:

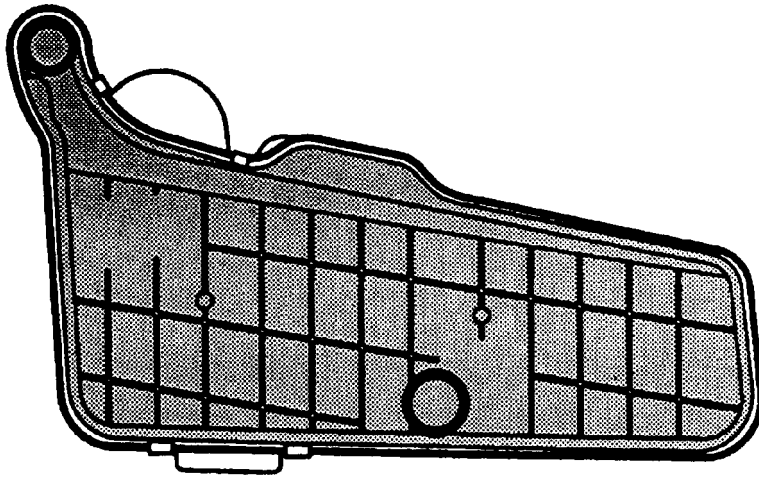

(1) BOTTOM PAN OIL FILTER - Upgraded to the "Sealed Seam" design level and can easily be identified from the previous filter, as shown in Figure 1. The new design level made the THM 4T60 transaxle oil filter very similar in appearance to the THM 4T60-E transaxle oil filter, but they have different baffles, as shown in Figure 2.

INTERCHANGEABILITY:

(1) New design and previous design level THM 4T60 (440-T4) transaxle bottom pan oil filters can be used on any THM 4T60 (440-T4) transaxle as shown in Figure 1.

(2) THM 4T60 (440-T4) and THM 4T60-E transaxle bottom pan oil filters, ARE NOT INTERCHANGEABLE, because of the different baffles as shown in Figure 2. Regardless of which way they are mixed, the baffle will interfere with the accumulator housing.
