

Technical Service Information

THM 4L60 (700-R4) NEW DESIGN OIL FILTER

CHANGE: Oil Filter and Filter Seal - Beginning July 6, 1987.

PARTS AFFECTED: Oil Filter - The new design filter is wider, has a felt element in place of the screen, and is bottom suction instead of top suction (See Figure 1).

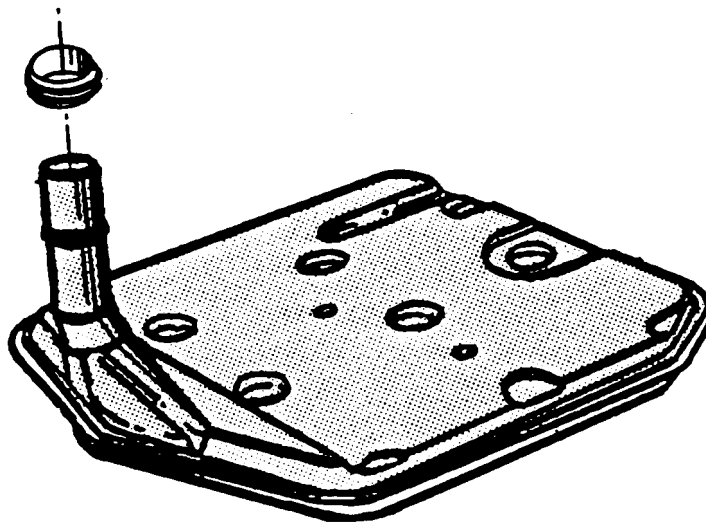

INTERCHANGEABILITY:

The new design filter and filter seal can be used on "MOST" previous model 700-R4 transmissions. The filter retaining clip is not needed with the new design filter, and should be discarded.

SPECIAL NOTE: Late filter will retro fit in "MOST" cases. Make the following check to be certain that the filter is compatible with your bottom pan. Install pan without gasket. If the pan rocks, or is not flush with the pan rail on the case, you will have to use the early filter or the late model "DEEP" bottom pan. See Figure 2 for deep pan identification.
