THM 4T60-E 3RD GEAR STARTS, NO A/C, NO VOLTAGE TO "E" TERMINAL

- COMPLAINT:** Some 1995-1996 Buick Century and Oldsmobile Ciera vehicles, equipped with the 3.1L engine, may exhibit a 3rd gear start condition and the air conditioner not working. Since the vehicle came into a transmission shop we immediately check for voltage at terminal "E" at the case connector, and find 0 volts. After inspecting the fuse block, you discover that there are NO blown fuses.
- CAUSE:** The cause may be, a blown *"In-Line"* fuse behind the instrument panel as illustrated in Figure 1, that also controls voltage to terminal "E" at the transaxle.
- CORRECTION:** Remove the glove compartment for access to the "In-Line" fuses, and replace the A/C fuse, as shown in Figure 1.
